

S001 Aurelia Home Decor - Seller Onboarding Summary

Project Document | Operations

Document ID	PRJ-S001-001	Seller ID	S001
Department	Operations	Classification	CONFIDENTIAL
Owner	Neha Gupta	Created Date	2023-03-06
Related Scenario ID	Not scenario-specific	Document Type	Project Document

1. Purpose

This document closes out the onboarding of Aurelia Home Decor Pvt. Ltd. (S001) onto Nexora Marketplace. It records what was delivered, what was deferred, the commercial and technical configuration agreed at go-live, and the open items handed over to the account team. It is the reference record for questions about how this account was originally configured.

2. Onboarding Timeline

Date	Milestone	Outcome
2022-12-08	Commercial agreement signed	Silver tier, fortnightly settlement
2023-01-09	Documentation and KYC verification	Completed, no exceptions
2023-01-16	Category and commission mapping	Home & Living, 14.5 percent average
2023-01-24	Catalogue preparation workshop	4,100 SKUs prepared for first load
2023-02-01	Test listing load in sandbox	118 validation errors, all corrected
2023-02-09	Fulfilment centre verification, Jaipur	Approved, single-node dispatch
2023-02-14	Go-live on CSV listing flow	Account activated
2023-02-28	Two-week stabilisation review	Passed with two open items
2023-03-06	Onboarding formally closed	Handover to account management

3. Scope Delivered

3.1 Commercial Configuration

Aurelia was activated on Silver tier with a fortnightly settlement cycle and a T+2 payout lag. Commission was configured per sub-category rather than as a flat rate, because the decor range spans wide margin bands: soft furnishings were mapped to 11 percent and decorative lighting to 18 percent. This sub-category mapping is important context for the tax and settlement issues that the account encountered later, since lighting was the sub-category affected by the February 2026 HSN revision.

3.2 Catalogue

The initial catalogue load was 4,100 SKUs against a planned 4,500. The shortfall was intentional: 400 handwoven SKUs had inconsistent dimension attributes and were held back rather than published with poor data. Aurelia completed those listings over the following six weeks.

Catalogue quality at onboarding was unusually good because Aurelia manufactures its own products and controls its own product data. Validation error density was 2.9 percent, against a platform average at the

time of roughly 11 percent for new sellers.

3.3 Integration at Go-Live

Aurelia went live on the CSV listing flow rather than on a direct API integration. This was a deliberate sequencing decision: the seller's ERP project was not complete, and delaying go-live until the API was ready would have pushed activation past the March seasonal peak.

Function	Go-live method	Planned target
Listings	CSV upload through seller portal	Seller API v2
Inventory	Manual stock file, twice daily	Real-time stock calls
Orders	Portal download plus email notification	Webhook push
Settlement	Portal statement download	Report endpoint

3.4 Fulfilment

A single fulfilment centre in Jaipur was verified and approved. Dispatch capacity was assessed at 900 units per day with a surge capability of 1,400. No secondary node was configured, which was accepted as a known single-point-of-failure for this account.

4. Exceptions and Decisions

ID	Decision	Rationale	Approver
OB-001	Go live on CSV rather than API	Avoid missing the March seasonal window	Operations
OB-002	Publish 4,100 of 4,500 SKUs	Data quality preferred over catalogue size	Business
OB-003	Single fulfilment node accepted	Seller has no second warehouse	Operations
OB-004	Sub-category commission mapping	Wide margin variance across the range	Business

Decision OB-001 created a two-stage onboarding. The second stage, migration to Seller API v2, was completed in September 2023 and is documented in the integration project plan.

5. Stabilisation Review

The two-week review on 28 February 2023 assessed order flow, dispatch performance and settlement correctness.

- **Order flow:** 1,247 orders processed, no systemic failures.
- **Dispatch:** 96.4 percent within SLA; misses concentrated on two oversized product lines requiring special packaging.
- **Settlement:** first cycle reconciled cleanly against the seller's own order export, variance 0.2 percent.
- **Support:** 9 tickets raised, all catalogue or portal usage questions.

Two items remained open at closure:

1. Oversized packaging SLA exception for two product lines, to be reviewed

- after the first festive season.
2. Manual inventory file handling, to be removed by the API migration.

6. Handover

Function	Owner at handover	Department
Commercial relationship	Aditya Verma	Business
Support queue ownership	Rahul Sharma	Support
Operational procedures	Neha Gupta	Operations

The account was handed to Business on 6 March 2023. Onboarding artefacts were retained per the Data Retention Policy. Access to this record is restricted to identities holding S001 in scope.

7. Lessons Recorded

The two-stage onboarding worked, but the manual inventory file introduced avoidable operational load for six months. The Seller Onboarding Runbook was subsequently amended to require an explicit exit date for any manual interim process agreed at go-live, rather than an open-ended commitment to migrate later.
