Ticket Header

Field	Value
Ticket ID	TKT-2026-0224-091
Seller	S001 - Aurelia Home Decor
Raised by	Ritika Bansal on behalf of Aurelia finance
Channel	Seller portal
Raised at	2026-02-24 15:12 IST
Priority	P2 - High (compliance deadline, no service outage)
Category	Invoicing and tax
Assigned to	Rahul Sharma, Support
Routed to	Operations (tax mapping), Business (decision)
Closed at	2026-03-09 11:40 IST
Final status	Resolved - credit notes issued, mapping corrected

Issue

Aurelia's finance team was preparing its February GST filing and found that invoices for decorative lighting products listed after 1 February 2026 had been issued at 18 percent. The applicable rate for those products is 12 percent following the HSN revision.

This was raised as P2 rather than P1. Nothing was broken from a service perspective, orders were flowing normally, and no payout was blocked. But the filing deadline gave it a hard date, and an incorrect tax document is a compliance exposure for the seller rather than an inconvenience.

Scope Established

I queried invoices for the account by sub-category and rate for the February period.

Sub-category	Invoices	Rate applied	Rate expected
Decorative lighting, listed before 2026-02-01	3,806	12 percent	12 percent
Decorative lighting, listed on or after 2026-02-01	1,240	18 percent	12 percent

Sub-category	Invoices	Rate applied	Rate expected
Soft furnishings	5,612	12 percent	12 percent
Decor accessories	2,180	18 percent	18 percent

The pattern was clean: only lighting SKUs created after the HSN revision were affected. SKUs that existed at the time of the revision had been remapped correctly. This told me the calculation logic was fine and the problem was in category mapping for new listings.

Total tax difference: INR 2,17,600.

Investigation Notes

Working with the Operations tax desk, we established that the HSN revision was applied as a one-time remap of existing SKUs. The category default for decorative lighting was left at 18 percent. Any SKU created after the remap picked up the default rather than the revised mapping.

So there was no defect in the invoicing service. The invoicing service correctly applied the rate it was given. The mapping was incomplete.

This distinction mattered for routing. I did not escalate to Engineering, because there was nothing for Engineering to fix in the immediate term. I routed the correction to Operations and the commercial decision to Business.

Decision Required

Support could not resolve this ticket alone. Three things had to be decided: whether to re-issue invoices or adjust prospectively, who absorbs the INR 2,17,600 difference, and whether a control should be added.

Those decisions sat with Aditya Verma and are recorded in decision record DR-2026-011. The outcome was to re-issue credit notes, absorb the difference at platform cost, and add a mapping validation control.

Timeline

Date	Event
2026-02-24	Ticket raised, scope established same day
2026-02-25	Call with Aurelia finance, interim position communicated
2026-02-27	Tax category mapping corrected by Operations
2026-03-02	Commercial decision approved
2026-03-05	1,240 credit notes issued and invoices re-issued
2026-03-09	Seller confirmed filing position restored, ticket closed

Resolution

Mapping corrected on 27 February. Credit notes and corrected invoices issued on 5 March. Aurelia confirmed on 9 March that its February filing position was restored. A blocking validation was deployed on 18 March that prevents publication of a listing whose tax category resolves to a category default.

Support Observation

The seller found this, not the platform. There was no reconciliation check comparing the tax rate on issued invoices against the current mapping for the product's HSN classification. That gap is now closed by the blocking validation, but only for new listings. A future rate revision will still require an explicit remap and there

is no control that verifies the remap was complete.
