

TKT-2026-0421-162 - SFTP credential exposure, immediate rotation required

Support Ticket | Support

Document ID	TKT-2026-0421-162	Seller ID	S002
Department	Support	Classification	RESTRICTED
Owner	Rahul Sharma	Created Date	2026-04-21
Related Scenario ID	SC-008	Document Type	Support Ticket

Ticket Header

Field	Value
Ticket ID	TKT-2026-0421-162
Seller	S002 - BluePeak Electronics
Raised by	Admin, Platform Administrator (internal detection)
Channel	Security alert, ticket created by Support for seller coordination
Raised at	2026-04-21 07:40 IST
Priority	P1 - Critical (security)
Category	Access and credentials
Assigned to	Rahul Sharma, Support (seller coordination only)
Incident owner	Admin, IT
Closed at	2026-04-24 16:00 IST
Final status	Resolved - credentials rotated, controls added
Classification	RESTRICTED

This ticket is classified RESTRICTED. It records a credential exposure and the coordination required with the seller. It is readable only at RESTRICTED clearance. Technical detail is in INC-2026-0421.

Why This Ticket Exists

This was not a seller-reported issue. It was detected internally and a ticket was opened so that the seller-facing coordination had a record: BluePeak had to be told that its credentials were being rotated, and its integration team had to apply new credentials within a short window or its feeds would fail.

My role on this ticket was coordination with Sameer Khanna, not investigation. Investigation was owned by Admin with Engineering support, per the Security Incident Response Policy.

What Was Exposed

A staging SFTP credential for the S002 integration was found embedded in a troubleshooting script that had been shared outside the company. The credential was valid and had access to the S002 SFTP endpoint.

Elevated failed authentication attempts against that endpoint were observed in the same period. No successful unauthorised authentication was confirmed, but the credential had to be treated as compromised regardless.

Seller Coordination

Time (IST)	Action
21 Apr 07:40	Security alert raised, ticket opened
21 Apr 08:15	Admin authorises immediate rotation
21 Apr 08:30	I call Sameer Khanna, brief him, agree a rotation window
21 Apr 09:00	Credentials rotated; S002 feeds fail as expected
21 Apr 10:20	BluePeak applies new credentials, feeds resume
21 Apr 11:00	First successful catalogue file processed with new credentials
22 Apr 15:00	Joint call with BluePeak on controls and process
24 Apr 16:00	IP allowlisting confirmed active, ticket closed

The rotation deliberately broke BluePeak's feeds for 80 minutes. That was the correct trade-off and Sameer accepted it without argument once the reason was explained. A compromised credential with write access to a catalogue feed is a worse problem than 80 minutes of feed downtime.

Controls Added

Control	Owner	Status
Credentials rotated	IT	Complete 2026-04-21
IP allowlisting on the S002 SFTP endpoint	IT	Complete 2026-04-24
Secret scanning in the CI pipeline	Engineering	Complete 2026-05-08
Automated 90-day credential rotation	IT	Complete 2026-06-12
Ban on credentials in shared troubleshooting scripts	IT	Policy reminder issued

Support Process Finding

The troubleshooting script that carried the credential originated from a support workflow. Support engineers were assembling ad hoc scripts to diagnose feed problems and those scripts sometimes contained connection details.

Two changes were made to Support practice as a result:

1. Diagnostic tooling for seller feeds is now provided centrally with

credentials resolved from the credential store at runtime, so a support engineer never handles a credential value.

2. No script containing any connection detail may be shared outside the

company, regardless of whether the credential is a staging or production one. The distinction is not meaningful to an attacker.

Seller Position

BluePeak's only request was advance notice of future rotations where possible, so its integration team can stage the change rather than react to a feed failure. Automated 90-day rotation now runs on a published schedule, which satisfies that request for routine rotations. Emergency rotations remain immediate by necessity.
