Field	Value
Ticket ID	TKT-2026-0908-341
Seller	S004 - StrideOne Footwear
Raised by	Karan Mehta, Marketplace Lead
Channel	Phone at 08:05, ticket created by Support
Raised at	2026-09-08 08:20 IST
Priority	P1 - Critical (all listings suspended, full revenue stop)
Category	Account standing and risk
Assigned to	Rahul Sharma, Support
Routed to	Neha Gupta (Operations, decision owner), Admin (IT)
Closed at	2026-09-10 17:15 IST
Final status	Resolved - suspension lifted, recorded as platform-caused

Report

Karan called at 08:05 IST. All StrideOne listings had been suspended overnight. He had received an automated notification at 02:14 stating that the account was suspended pending review, with no contact name and no indication of duration.

His first question was whether this was a mistake. His second was who could reverse it. He was measured but the commercial position was stark: a dropship account with no listings has no revenue at all, and he estimated INR 6,40,000 per day.

What Support Could And Could Not Do

I want to record this clearly because it shaped the whole ticket.

Support has no authority to lift a suspension. The suspension was applied by the automated risk rules engine and can only be lifted by Operations as the policy owner, with IT able to act on the platform. My job was to establish the facts, get them to the decision owner in a form they could act on immediately, and keep the seller informed.

What I could do was answer the question the seller actually needed answered: why.

Facts Established Within 90 Minutes

Condition	Threshold	Observed	Window
Return rate	Above 25 percent	26.4 percent	Trailing 30 days
Settlement chargeback ratio	Above 1.5 percent	1.9 percent	Trailing 30 days

Both conditions were breached, which is why suspension was automatic rather than flagged for review. Then the important part. I pulled the weekly return rate rather than the trailing average:

Week ending	Return rate
2026-08-09	27 percent
2026-08-16	26 percent
2026-08-23	21 percent
2026-08-30	16 percent
2026-09-06	13 percent

The return rate had been falling for four consecutive weeks. The trailing 30-day average was still above the threshold because it included the peak. The rule had suspended the account for a condition that was already resolving. And the cause of the peak was ticket TKT-2026-0805-301: a platform-side size chart defect, reported by this seller, fixed on 19 August.

Escalation

Routed to Neha Gupta at 09:55 IST with that trend table and the link to the earlier ticket. I put the argument in one line in the escalation note: the metric that triggered this suspension was driven by a platform defect that the seller reported and that we have already fixed. Admin was copied because lifting a suspension requires platform action.

Timeline

Date and time (IST)	Event
08 Sep 02:14	Automated suspension applied
08 Sep 08:05	Seller calls Support
08 Sep 08:20	Ticket created
08 Sep 09:55	Facts and trend analysis routed to Operations
08 Sep 14:30	Operations begins formal review
09 Sep 11:00	Seller call with Operations and Business
10 Sep 16:40	Suspension lifted
10 Sep 16:55	Listings confirmed live by Support
10 Sep 17:15	Seller confirms orders flowing, ticket closed

Outcome

The suspension was lifted at 16:40 on 10 September after a formal review by Operations. The review found no seller conduct issue, attributed the return rate to the platform-side defect, and recorded the suspension as platform-caused so that it does not count against future risk assessment.

Commercial consequences were waived: the returns reserve adjustment of INR 3,10,000 was reversed and reverse logistics costs for the affected period were absorbed by the platform. StrideOne did not seek compensation for the two days of lost sales.

Full reasoning is in decision record DR-2026-047.

Process Failures Worth Recording

Three things went wrong here beyond the risk rule itself.

1. **No human in the loop before a full revenue stop.** The account went from trading to fully suspended at 02:14 with no prior warning and no named contact.
2. **The notification was useless.** It told the seller they were suspended pending review. It did not say which metric, which threshold, which window, or who to contact.
3. **The rule had no knowledge of the defect.** The platform had an open record showing that this seller's return rate was inflated by a platform defect. The rule could not see it.

All three are addressed in the corrective actions attached to DR-2026-047. A manual review gate is active for this account until the rule recalibration completes.
