

S002 BluePeak Electronics - Account Overview

Account Overview | Operations

Document ID	S002-ACC-001	Seller ID	S002
Department	Operations	Classification	CONFIDENTIAL
Owner	Neha Gupta	Created Date	2026-09-14
Related Scenario ID	SC-002, SC-003, SC-008, SC-011	Document Type	Account Overview

1. Account Snapshot

Field	Value
Seller ID	S002
Registered Name	BluePeak Electronics Pvt. Ltd.
Category	Consumer Electronics - mobiles, audio, accessories
Business Model	Multi-brand reseller and authorised distributor
Account Tier	Platinum
Onboarded	2022-06-01
Integration	SFTP CSV batch feeds plus Inventory Sync Service
Catalogue Size	~142,000 SKUs
Fulfilment	Two seller-owned centres: Bhiwandi and Chennai
Settlement Cycle	Weekly, T+1 payout after cycle close
Operations Owner	Neha Gupta (Operations)
Support Owner	Rahul Sharma (Support)
Seller Contact	Sameer Khanna, Head of Marketplace Integrations

2. Business Profile

BluePeak is the largest seller on the platform by catalogue size and by order throughput. It does not manufacture: it resells authorised stock from multiple electronics brands, which means margins are thin and volume is everything. A one percent oversell rate that would be tolerable for a smaller seller translates into hundreds of cancelled orders per day on this account.

Two structural characteristics define how BluePeak is supported.

First, the catalogue is very large and changes constantly. Prices move daily, and stock moves continuously across two fulfilment centres. BluePeak deliberately chose batch integration over real-time calls because pushing 142,000 SKUs through per-movement API calls was not economical for its systems. That decision is the origin of most of the data-freshness issues on the account.

Second, BluePeak runs promotional flash sales with external marketing spend. These events generate extreme, short-lived traffic spikes that have twice exposed platform capacity limits. The account is therefore treated as a capacity-planning input, not merely as a support workload.

3. Commercial Terms

Term	Value	Notes
Commission band	6.8 percent average	Electronics category, volume-tiered
Settlement frequency	Weekly	Platinum tier entitlement
Payout lag	T+1 business day after cycle close	Fastest band on the platform
Return window	7 days, platform-assisted	Brand warranty handled separately
Tier review	Annual, next review June 2027	Platinum retained since 2024
Capacity notice	10 working days before a flash sale	Added after July 2026

The 10-working-day capacity notice requirement was introduced as a direct consequence of the July 2026 order API incident and is now a contractual expectation rather than a courtesy.

4. Integration Profile

- **Catalogue and price:** nightly SFTP CSV drop, processed by the catalogue importer.
- **Inventory:** Inventory Sync Service consumes a stock file on a scheduled batch and publishes availability to listings.
- **Orders:** Order API pull plus event bus consumption for order state changes.
- **Settlement:** settlement feed derived from order events; this coupling is why the June 2026 consumer lag incident produced a stale settlement feed.
- **Credentials:** SFTP service accounts with IP allowlisting and 90-day automated rotation, both introduced after the April 2026 security event.

The batch design is efficient but introduces a freshness window. Any defect in scheduling, mapping or event processing shows up as stale or inconsistent data rather than as an outright error, which makes detection harder.

5. Account History

Date	Event	Reference
2022-06-01	Seller onboarded with SFTP batch integration	Onboarding record
2024-03-19	Upgraded to Platinum tier	Annual tier review
2024-11-05	Second fulfilment centre added (Chennai)	Expansion project
2026-04-21	SFTP credential exposure detected and contained	SC-008
2026-05-19	Inventory synchronisation drift, 412 oversells	SC-002
2026-06-02	Order event consumer lag, settlement feed stale 9h	SC-011
2026-07-16	Order API timeouts during flash sale	SC-003

5.1 Scenario SC-008 - Credential Exposure (April 2026)

A staging SFTP credential for this account was embedded in a troubleshooting script that was shared externally. Credentials were rotated, IP allowlisting was enabled and automated rotation was introduced. Records for this scenario are classified RESTRICTED and are not readable at CONFIDENTIAL clearance.

5.2 Scenario SC-002 - Inventory Synchronisation Drift (May 2026)

The nightly stock batch drifted by up to 26 hours because the scheduler applied a fixed UTC offset while the stock window is computed in IST, and a stale SKU mapping table remained after a catalogue restructure. 18,400 SKUs published stale stock and 412 orders oversold. The scheduler was pinned to Asia/Kolkata and the mapping was rebuilt.

5.3 Scenario SC-011 - Order Event Loss (June 2026)

A partition expansion left the order event consumer in a rebalance loop, stranding 6,700 events and leaving the settlement feed nine hours stale. Poll configuration was tuned and offsets were replayed. No settlement value was lost, but reconciliation warnings had to be cleared manually.

5.4 Scenario SC-003 - Order API Timeouts (July 2026)

During a partner flash sale, an unbounded client retry policy plus a missing circuit breaker exhausted the order service connection pool. p99 latency reached 12.4 seconds and 3,900 order placements failed. Circuit breaking, pool resizing and enforced timeouts resolved it.

6. Support Profile

BluePeak generates the highest ticket volume on the platform, typically 30 to 45 tickets per quarter. Sameer Khanna escalates quickly and expects hourly updates during a live incident, which shapes the communication cadence used on this account.

- Inventory and catalogue data quality: approximately 40 percent of volume.
- API availability and latency: approximately 25 percent.
- Settlement and reconciliation: approximately 20 percent.
- Access, credentials and configuration: approximately 15 percent.

7. Current Watch Items

1. **Batch freshness.** The 26-hour drift ceiling has been removed, but the account still depends on scheduled batches; freshness monitoring remains a standing operational check.
2. **Flash-sale capacity.** Capacity notice is now contractual; each event requires a pre-sale readiness confirmation.
3. **Credential hygiene.** Automated rotation is live; the next access review must confirm that no manual credentials remain.

8. Internal Ownership and Access

Function	Owner	Department
Operational ownership	Neha Gupta	Operations
Support escalation	Rahul Sharma	Support
Technical remediation	Vikram Singh	Engineering
Platform administration	Admin	IT

S002 sits inside the seller scope of Rahul Sharma, Vikram Singh and Neha Gupta, and is visible organization-wide to Admin. Aditya Verma does not hold S002 in scope; commercial questions on this account are handled by Operations with IT oversight.
