

S004 StrideOne Footwear - Account Overview

Account Overview | Operations

Document ID	S004-ACC-001	Seller ID	S004
Department	Operations	Classification	CONFIDENTIAL
Owner	Neha Gupta	Created Date	2026-09-14
Related Scenario ID	SC-006, SC-012	Document Type	Account Overview

1. Account Snapshot

Field	Value
Seller ID	S004
Registered Name	StrideOne Footwear Pvt. Ltd.
Category	Fashion & Footwear - sneakers, formal, outdoor
Business Model	Marketplace dropship using third-party logistics partners
Account Tier	Gold
Onboarded	2025-09-22
Integration	Seller API v2 plus dropship product feed
Catalogue Size	~18,000 SKUs
Fulfilment	No owned warehouse; four 3PL partners
Settlement Cycle	Fortnightly, T+3 payout after cycle close
Operations Owner	Neha Gupta (Operations)
Seller Contact	Karan Mehta, Marketplace Lead

2. Business Profile

StrideOne is a dropship operator. It holds brand authorisation but no stock of its own: orders are routed to whichever third-party logistics partner holds the inventory. This gives StrideOne breadth without capital tied up in warehousing, and it makes the account unusually dependent on **catalogue data quality**.

In footwear, the single most important attribute is size. A customer who receives the wrong size returns the product almost without exception, and a systematic size error produces a return wave rather than isolated complaints. Because StrideOne does not touch the goods, it also cannot inspect or correct a size problem at dispatch. The platform's published size chart is effectively the product specification.

This dependency is the reason the two scenarios on this account are linked: a defect in size chart publication drove the return rate above a risk threshold, and the risk threshold triggered an automated account suspension.

3. Commercial Terms

Term	Value	Notes
Commission band	17.4 percent average	Fashion category

Term	Value	Notes
Settlement frequency	Fortnightly	Gold tier standard
Payout lag	T+3 business days after cycle close	Extended for return exposure
Return window	14 days, size-and-fit exchanges included	Category standard
Return rate threshold	25 percent triggers account review	Risk rule, see SC-012
Reserve	5 percent of cycle value held against returns	Dropship standard

4. Integration Profile

- **Orders:** Seller API v2, with routing metadata identifying the 3PL partner that will fulfil each line.
- **Catalogue:** dropship product feed imported on a schedule; attributes including size charts are derived from partner-supplied data.
- **Size and fit:** conversion logic maps supplier sizing to the size chart published to buyers. This conversion is the component that failed in August 2026.
- **Returns:** reverse logistics handled by the 3PL partner, with return reason codes flowing back to the platform.
- **Settlement:** standard fortnightly cycle with a returns reserve applied.

5. Account History

Date	Event	Reference
2025-09-22	Seller onboarded, dropship integration delivered	Onboarding project
2025-12-04	Fourth 3PL partner added to routing	Integration change
2026-07-14	Feed importer schema update deployed	SC-006 precursor
2026-08-05	Size chart defect identified, return rate at 27 percent	SC-006
2026-08-19	Corrected size charts republished	SC-006
2026-09-08	Account auto-suspended by risk rule	SC-012
2026-09-10	Suspension lifted after review	SC-012

5.1 Scenario SC-006 - Size Chart Defect (August 2026)

A schema update to the dropship feed importer applied the UK-to-EU size conversion twice, publishing size charts two sizes smaller than the physical product. The return rate rose from 9 percent to 27 percent in three weeks, with 2,860 returns citing size-too-small. The conversion was corrected, size charts were republished on 19 August 2026, a feed validation rule was added and affected customers were offered exchanges. The return rate returned to about 10 percent by late September.

5.2 Scenario SC-012 - Account Suspension Review (September 2026)

On 8 September 2026 the automated risk rule suspended StrideOne's listings because the return rate exceeded 25 percent and a settlement chargeback threshold was breached. Review established that the elevated return rate was attributable to the platform-side size chart defect recorded in SC-006 rather than to seller conduct. The suspension was lifted on 10 September 2026, a corrective action plan was agreed, and the risk rule was recalibrated to take known platform defects into account. Estimated lost sales during the suspension were INR 6,40,000 per day.

SC-006 and SC-012 are the clearest example in this dataset of one event causing another across departmental boundaries: an Engineering defect produced an Operations risk determination with commercial consequences.

6. Support Profile

StrideOne's ticket volume is moderate, 10 to 18 per quarter, and is dominated by returns and catalogue attributes rather than by platform availability. Karan Mehta tends to report aggregated patterns rather than individual orders, which is useful for detecting systematic defects early.

- Returns, size and fit: approximately 55 percent of volume.
- Catalogue attributes and feed behaviour: approximately 25 percent.
- Account standing, risk and settlement reserve: approximately 20 percent.

7. Current Watch Items

1. **Return rate trend.** Weekly monitoring continues until the rate holds below 12 percent for two consecutive months.
2. **Feed validation.** The rule that rejects double conversion must be verified against the next partner schema change.
3. **Risk rule calibration.** The recalibrated suspension rule needs a post-implementation review before the next festive peak.

8. Internal Ownership and Access

Function	Owner	Department
Operational ownership	Neha Gupta	Operations
Technical remediation	Vikram Singh	Engineering
Platform administration	Admin	IT

S004 sits inside the seller scope of Neha Gupta only, and is visible organization-wide to Admin. Aditya Verma, Rahul Sharma and Vikram Singh do not hold S004 in their assigned seller scopes; Engineering work on SC-006 was performed as platform remediation rather than as account-scoped work.
